

Faculty of Computers and Information Technology

Computer Networks-2

Information:

Course Code: DM323 Level: Undergraduate Course Hours: 3.00- Hours

Department: Department of Computer Science

Area Of Study:

Understand knowledge that enhances skills to learn different types of routing protocols.

Use and adopt fundamental of data multicast and broadcast routing and internetworking.

Solve problems of congestion for TCP and real time transport layer protocols.

Show a complete understanding of main network applications such as E-Mail, Web browsing, and streaming audio/video.

Evaluate different algorithms for network security such as private, public key algorithms and digital signature. Comprehend deeply the basic concepts of hot topics in computer networks such as cellular, ad-hoc, vehicular and sensor networks

Description:

Difference between LANs/MANs and WANs; Transmission media; LAN/MANs topologies: Bus; Tree; Ring; Star Protocol Architecture; Logical link control (LLC); Medium access control (MAC)-LLC Services; LLC Protocols; Flow control; Error control; Ethernet (IEEE 802.11, CSMA/CD); Frame Component . ÁMAC protocol . ÁF€ÁMbps Ethernet . ÁGigabit Ethernet; Token ring; Token priority . ÁToken Maintenance; FDDI: Frame component . ÁRing Maintenance; Internetworking: Bridge, Router

Course ou	tcomes:			
a.Knowled	lge and Understanding: :			
1 -	Discuss fundamental concepts related to routing mechanisms and congestion control			
2 -	Identify different services used in Application Layer such as E-mail, browsing and audio/video streaming			
3 -	Explain the principles and techniques of network security			
b.Intellect	ual Skills: :			
1 -	Analyze different problems in static routing techniques and how dynamic routing solves these problems			
2 -	Propose a set of alternative solutions for congestion in TCP and real time transport layer protocols			
3 -	Select appropriate quality of service parameters for different network applications			
4 -	Classify wireless technologies used in cellular and ad-hoc networks			
c.Professi	onal and Practical Skills: :			
1 -	Apply effective information to implement some network security algorithms such as AES algorithm			
2 -	Deploy OPNET or NS2 simulation tool to simulate routing protocols and evaluate congestion control methods			
3 -	Apply different soft skills by oral, written, presentations in discussing the network applications			
d.General	and Transferable Skills: :			
1 -	Work on a team to simulate routing protocols and congestion control methods			

- 2 Apply communications skills in presentation and report writing for network applications
- 3 Apply quantitative methods and skills in understanding and presenting network security algorithms and wireless networks

ABET Course outcomes :				
1 -	Demonstrate adequate understanding of basic concepts of different types of routing protocols			
2 -	Use and adopt fundamental of data multicast and broadcast routing and internetworking			
3 -	Solve problems of congestion for TCP and real time transport layer protocols			
4 -	Demonstrate adequate understanding of main network applications such as E-Mail, Web browsing, and streaming audio/video			
5 -	Evaluate different algorithms for network security such as private, public key algorithms and digital signature			
6 -	Demonstrate adequate understanding of the basic concepts of emerging advances in computer networks such as cellular, ad-hoc, vehicular and sensor networks			

Course Topic And Contents :						
Topic	No. of hours	Lecture	Tutorial / Practical			
Advanced Routing Algorithms: Flooding, Distance Vector and Link State Routing	4	2	2			
Advanced Routing Algorithms: Hierarchical, Broadcast and Multicast Routing, and Internetworking	4	2	2			
Congestion Control in Transport Layer: TCP Congestion Control and Real Time Transport Protocols	4	2	2			
Application Layer: Electronic Mail and World Wide Web	4	2	2			
Application Layer: Streaming audio and video	4	2	2			
Network Security: Private, Public Key Algorithms and Digital Signature	4	2	2			
Communication Security and Authentication Protocols	4	2	2			
E-mail and Web security	4	2	2			
Mid Term Exam	2					
Overview on Cellular Networks	4	2	2			
Overview on Mobile Ad-Hoc Networks	4	2	2			
Mobile IP and Vehicular Networks	4	2	2			
Wireless Sensor Networks	4	2	2			
Final Exam	2					

<u>Teaching And Learning Methodologies :</u>

Interactive Lectures including Discussions

Practical Lab Sessions

Self-Study (Project / Reading Materials / Online Material / Presentations)

Case Studies

Problem Solving

Course Assessment :							
Methods of assessment	Relative weight %	Week No	Assess What				
Assignments	5.00	4					
Final Exam	40.00	14					
Midterm Exam (s)	20.00	9					
Presentations	5.00	12					
Quizzes	10.00	5					
Research and Reporting	5.00						
Team Work Projects	5.00						

Course Notes:

An Electronic form of the Course Notes and all the slides of the Lectures is available on the Students Learning Management System (Moodle)

Recommended books:

W. Stallings, Wireless Communications and Networks, Pearson, last edition. ISBN: 978-0131918351
