

Basic Information :

Name : Dalia Samuel
Title : Professor of Pharmaceutical Sciences

Prof. Dr. Dalia Samuel, professor of Pharmaceutics at Pharmaceutics and Pharmaceutical Technology Department. her doctoral research was performed at the University of Utah, USA with (distinguished) Prof. William I. Higuchi on transdermal drug delivery. Her post doctorate research was conducted at Oregon State University, Corvallis, Oregon, USA, on transdermal vaccines.

Education :

Certificate	Major	University	Year
PhD	Pharmaceutical Sciences	Helwan University - Faculty of Pharmacy	2003
Masters	Pharmaceutical Sciences	Helwan University - Faculty of Pharmacy	2000
Bachelor	Pharmaceutical Sciences	Cairo University - Faculty of Pharmacy	1994

Teaching Experience :

Name Of Organization	Position	From Date	To Date
FUE	Head of Pharmaceutics Dept	01/01/2018	01/01/2020
FUE, Cairo, Egypt	Professor of Pharmaceutics	01/01/2013	01/01/2016
Dept. of Pharmaceutics, Oregon State University, Corvallis, Oregon, USA	Post doctorate candidate	01/01/2006	01/01/2007
Dept. of Pharmaceutics and Pharmaceutical Chemistry, University of Utah, Salt Lake City, Utah, USA	PhD student	01/01/2000	01/01/2002
Faculty of Pharmacy, Dept. of Pharmaceutics, Helwan University, Cairo, Egypt	TA, Lecturer then Associate Professor of Pharmaceutics	01/01/1995	01/01/2013

Research :

Boosting transdermal delivery of atorvastatin calcium via o/w nanoemulsifying system: Two-step optimization, ex vivo and in vivo evaluation.

Nanoemulsion: A review on mechanisms for transdermal delivery of hydrophobic and hydrophilic drugs.

Optimization of nano spray drying parameters for production of α -amylase nanopowder for biotherapeutic applications using factorial design

Butoconazole nitrate vaginal sponge: Drug release and antifungal efficacy

Enhanced Transdermal Permeability of Terbinafine through Novel Nanoemulgel Formulation; Development, In vitro and In vivo Characterization

Development of novel delivery system for nanoencapsulation of catalase: Formulation, characterization and in vivo evaluation using oxidative skin injury model.

In situ thermosensitive Tamoxifen citrate loaded hydrogels: an effective tool in breast cancer loco-regional therapy.

Cellular uptake, cytotoxicity and in-vivo evaluation of Tamoxifen citrate loaded niosomes

In-vitro skin permeation and biological evaluation of lornoxicam monolithic transdermal patches.

In-vitro skin permeation and biological evaluation of lornoxicam monolithic transdermal patches.

Silicone elastomer uptake method for determination of free 1- alkyl-2-pyrrolidone concentration in micelle and hydroxy- β -cyclodextrin systems used in skin transport studies

Conference :

Development of novel immobilized catalase delivery system through nanoencapsulation in Brij® niosomes.

Topically applied liposomal DNA for transcutaneous immunization"

loco-regional breast cancer therapy through in situ thermosensitive Tamoxifen citrate niosomal gels.

In-Vitro Cellular Uptake and Cytotoxicity of Tamoxifen Citrate Niosomes.

Novel Approaches for Promoting Drug and Gene Transdermal Permeation

Formulation and Pharmacotechnical evaluation of transdermal delivery patches of Lornoxicam.

In-vitro skin permeation and anti-inflammatory effect of Lornoxicam transdermal patches using rat paw edema model

In-vitro skin permeation and anti-inflammatory effect of Lornoxicam transdermal patches using rat paw edema model

Optimization of Declofinac sodium loaded chitosan-microspheres prepared by a modified coacervation method

Optimization of Declofinac sodium loaded chitosan-microspheres prepared by a modified coacervation method

Novel approach for determination of binding constant and thermodynamic activity of lipophilic drugs in cyclodextrins inclusion complexes.

Novel approach for determination of binding constant and thermodynamic activity of lipophilic drugs in cyclodextrins inclusion complexes

Silicone polymer uptake method ones concentration in micelle systems used in skin transport studies,

Mechanistic Studies of the Effect of Cyclodextrins on the in-vitro Transdermal Permeation of Corticosterone through Hairless Mouse Skin

Design and Evaluation of a New Ophthalmic Delivery System for Treatment of Corneal Infection

Other :

Boosting Transdermal delivery of Atorvastatin Calcium via o/w Nanoemulsifying System: Two-step optimization, ex vivo and in vivo evaluation

Awards :

Award	Donor	Date
Editorial Board member of Future Journal of Pharmaceutical Sciences, Elsevier	FUE	01/01/2015
AAPS membership	AAPS organization, USA	01/01/2000
