

Faculty of Engineering & Technology

Logical Design and Digital Circuits

Information :

Course Code : ELE 215

Level : Undergraduate

Course Hours : 3.00- Hours

Department : Department of Electrical Engineering

Instructor Information :

Title	Name	Office hours
Lecturer	Nermin Mohamed Fawzy Mahmoud Salem	10
Assistant Lecturer	Mostafa Mohamed Salaheldin Abdelkhalek	
Assistant Lecturer	Ahmed Essam Fahim Zahran	

Area Of Study :

- Understand and use different number systems and coding schemes.
- Analyze and design combinational logic based on minimizing Boolean functions.
- Analyze and design flip flops and get deeply involved with sequential circuits (especially synchronous).
- Train students to perform experiments on digital circuits using software tools for circuit logic design and simulation.

Description :

Review on number systems: positional notation, binary number systems, number base conversion, octal and hexadecimal, negative numbers, coded number systems, Switching functions: main operators, postulates and theorems, Analysis and synthesis of switching functions, incompletely specified functions, Design using NAND and NOR gates, standard combinational Logic, PLA & PAL implementation of combinational logic, Storage devices: 1-bit storage, set-reset FF, clocked SR-FF, positive and negative-edge triggered SR-FF, JK-FF, Race-around condition, Master-slave JK-FF, D-FF, T-FF, Excitation table. Introduction to sequential circuits and FSM.

Course outcomes :

a. Knowledge and Understanding: :

1 -	Describe different number systems: positional notation, binary number systems, number base conversion, octal and hexadecimal, negative numbers, coded number systems.
2 -	Discuss switching functions: main operators, postulates and theorems.
3 -	Explain analysis and design of combinational circuits and their applications.
4 -	Explain analysis and design of sequential circuits and their applications.

b. Intellectual Skills: :

1 -	Solve problems related to different number systems and its different applications.
2 -	Analyze problems related to different combinational circuits and their different applications.
3 -	Analyze problems related to different sequential circuits and their different applications.
4 -	Design digital circuits using professional software tools.

c. Professional and Practical Skills: :

1 -	Clarify theories and techniques of mathematics to solve digital circuit problems.
-----	---

2 -	Build the components and requirements for designing a complete digital circuit.
3 -	Develop the design and implementation of digital circuits using software tools and measuring instruments.
4 -	Seek thoroughly datasheets and identify appropriate specifications for required digital circuits either combinational circuits or sequential circuits.

d.General and Transferable Skills: :

1 -	Collaborate effectively within multidisciplinary team
2 -	Communicate effectively.
3 -	Effectively manage tasks, time, and resources.
4 -	Search for information and engage in life-long self-learning discipline.

Course Topic And Contents :

Topic	No. of hours	Lecture	Tutorial / Practical
Switching functions: main operators, postulates and theorems.	10	6	4
Analysis and synthesis of switching functions	10	6	4
Number systems and coding systems	10	6	4
Analysis of Combinational circuits.	10	6	4
Design of Combinational circuits.	10	6	4
Asynchronous sequential circuits	5	3	2
Analysis of Synchronous sequential circuits.	10	6	4
Design of Synchronous sequential circuits, registers	10	6	4

Teaching And Learning Methodologies :

Interactive Lecture
Discussion
Problem Solving
Experimental Learning
Cooperative Learning
Research
Site Visit (Field Trip)
Project/Assignment

Course Assessment :

Methods of assessment	Relative weight %	Week No	Assess What
Final exam	40.00		
o Electronic and computer Lab Experiments	10.00		
o In Class Quizzes and participation	20.00		
o Mid-Term Exams	30.00
