Description :

In this course students will integrate information about etiology , pathophysiology , pharmacology, pharmacokinetics , clinical pharmacology, and interpret patient's laboratory investigation together with clinical manifestation of some common chronic and acute conditions. The student can develop rational drug therapy and pharmacotherapeutic plans for patients in order to provide safe, effective , and rational drug therapy in the management of disease states concerning cardiac, vascular , pulmonary, and gastrointestinal disorders. The role of evidence based medicine in regard to therapeutic decisions is emphasized so that the student can design plans for monitoring pharmacotherapy in patients. In practical sessions students will develop skills in pharmacy practice and patient education.
