Description :

An introductory course designed to provide students with fundamental knowledge of management information systems and their concepts including the use of information systems for management decision-making and the impact of information systems on management. The course will be directed to provide broad introductory understanding of information systems employed to achieve the corporate objectives. The state-of-the-art technologies that will contribute towards the future development of IT systems and applications will also be introduced. The objective of this course is to become better informed users, customers and/or professionals in the application and use of information systems and technology. The issues contributing to successful planning, design, development, implementation and management of IT systems will be discussed in this course
