Information : Course Code : ENV 101 Level : Undergraduate Course Hours : 2.00- Hours Department : University Requirments Viniversity Requirments Viniversity Requirments Area Of Study : This course is designed to make students appreciate environment as a source of life and a player in shaping the political and economic policies of states. Some key questions get answers in this course, such as the question about how does the choice of a country or source of energy to run its economy and sustain the lives of its clizzers influences and get influence by environment. Students get to understand the influence of the geographical location and nature resources of a country on its choices in foreign policy. Course Goals:	Environmental Sciences						
Department : University Requirments Area Of Study: This course is designed to make students appreciate environment as a source of life and a player in shaping the political and economic policies of states. Some key questions get answers in this course, such as the question about how does the choice of a country source of energy to run its economy and sustain the lives of its citizens influences and get influenced by environment. Students get to understand the influence of the geographical location and natural resources of a country on its choices in foreign policy. Course Goals: "Aritroduce students to the importance of the environment in the political and economic choices of a country. "Aritoduce students to the importance of the environment." "Aritoduce students get to understand the influence of the geographical location and natural resources of a country. "Actanty the impact of politics on initiatives to save the environment." "Aritoduce studying topics such as: 1) agriculture and its political, societal and economic manifestations, 2) Energy, 3) Occurse outcomes : Includes studying topics such as: 1) agriculture and its political, societal and economic manifestations, 2) Energy, 3) Occurse outcomes : Indefertent energy sources in light of environmental closures also perceives how respective official and non-official institutions deal with these issues and what sort of impact they have. Course outcomes : Indefertent energy sources in light of environmental consequences. 1 Classify the different energy sources in light of environmental consequences.	Information :	-					
Area Of Study : This course is designed to make students appreciate environment as a source of life and a player in shaping the political and economic policies of states. Some key questions get answers in this course, such as the question about how does the choice of a country of source of energy to understand the influence of the geographical location and natural resources of a country on its choices in foreign policy. Course Goals: "Antroduce students to the importance of the environment in the political and economic choices of a country. "Areach about the political and economic choices that impact or are impacted by the environmental circumstances of a country. "Areach about the politics on initiatives to save the environment. "Athink beyond oil for viable alternatives. Description : This course entails focusing on delivering environmental studies to students of social sciences and humanities. This includes studying topics such as: 1) agriculture and its political, societal and economic manifestations, 2) Energy, 3) Ocean Resources, 4) Environmental Law and Politics, 5) the impact of Matural resources, 6) the relationship between environment is usue and society, as well as 7) sustainable development. This course also percives how respective official and non-official institutions deal with these issues and what sort of impact they have. Course outcomes : a.Knowledge and Understanding:: 1 1 Classify the different energy sources in light of environmental science. 1 2 Define terminology commonly used in environmental science. 2 3 Analyze the impact of oil trade on shaping of foreign policy decisions. 2 -

Evaluate learned information to postulated environmental scenarios to predict potential outcomes.

Course Topic And Contents :			
Торіс	No. of hours	Lecture	Tutorial / Practical
Introduction and syllabus	2	1	
Principles of the human-environment relationship	2	1	
Historical development of sources of energy	2	1	
Energy generation and environment: Adversarial relationship?	2	1	
Energy as a key player in IR	2	1	
Dynamics of oil politics	2	1	
Oilo impact on environment	2	1	
Midterm Exam		1	
The Kyoto Protocol and politics dugly face	2	1	
Assessing environment-friendly sources of energy: solar energy	2	1	
Assessing environment-friendly sources of energy: wind energy	2	1	
Assessing environment-friendly sources of energy: nuclear energy	2	1	
Role of non-state actors in preserving environment (IO, NGOs, and civil society).	2	1	
Future ahead	2	1	
Final Exam		1	

Teaching And Learning Methodologies :	
Data show and computer in lectures	
Demonstration videos	
Group discussion	
Research Paper	

Course Assessment :

Methods of assessment	Relative weight %	Week No	Assess What
Course Work (Attendance, Participation, Assignments, Quizzes,Research Paperõ D	30.00		To assess understanding and theoretical background of the intellectual and practical skills.
Final Exam	40.00	15	To assess knowledge and intellectual skills
Midterm Exam	30.00	8	To assess professional skills
