

Faculty of Engineering & Technology

Introduction to Microprocessors

Information:

Course Code: ELE 410 Level: Undergraduate Course Hours: 3.00- Hours

Department: Specialization of Mechatronics Engineering

Instructor Information:

Title	Name	Office hours
Lecturer	Mohamed Ali Mohamed Elsayed Torad	4
Teaching Assistant	Ahmed Mahmoud Mohamed Mahmoud Hegazy	

Area Of Study:

- π/Enrich students' knowledge about the characteristics of microprocessors, and its applications.
- Ashowing students the relationship between hardware and software and how they work together to accomplish a task.
- Ænrich students' knowledge about the major component of a microcontroller-based systems, describe the steps involving in assembling, linking, and executing a program.
- ″Árain students' to write programs in assembly and ‰ √Aanquages to perform given tasks and run them.

Description:

Microprocessor system design; 8051 architecture and organization; Instruction set; Addressing modes; stack and branching; Interrupts and exceptions; Microprocessor support circuits and peripheral interfacing; Assembly programming; C language programming; Applications include data collection and control of pneumatic, hydraulic and machine systems.

Course outcomes:

a. Knowledge and Understanding: :

- 1 Discuss issues about the microprocessor performance.
- 2 List the main syntax of assembly and % #Aanguages.
- 3 Outline fundamentals in computing, including hardware and oper-ating systems.
- 4 Discuss issues of reliability
- 5 Identify and demonstrate usage of tools, practices and methodolo-gies used in the specification, design implementation and critical evaluation of computer software systems.
- 6 Outline current and underlying technologies that support computer processing and inter-computer communication.

b.Intellectual Skills: :

- 1 Design microprocessor programs in assembly and % #Aanguages to perform a given task.
- 2 Debug microprocessor programs written in assembly or \$\mathbb{A}\$ in a given task.
- 3 Modify microprocessor programs written in assembly or \$\infty\$ \$\frac{1}{2}\$ an-guages to upgrade a given process.

c.Professional and Practical Skills: :

1 - Implement programs using the assembly and %□ Hanguages.

2 -	Use the assembly language to control the different computer units.		
3 -	Use the assembly language to write drivers for different computer accessories.		
4 -	Identify risks or safety aspects that may be involved in the opera-tion of computing equipment within a given context.		
5 -	Operate computing equipment efficiently, taking into account its logical and physical properties.		
d.General a	ind Transferable Skills: :		
1 -	Work in stressful environment and within constraints.		
2 -	Demonstrate efficient IT capabilities.		
3 -	Manage tasks and resources.		
4 -	Communicate effectively.		
5 -	Mange one's own learning and development, including time man-agement and organizational skills.		

Course Topic And Contents :				
Topic	No. of hours	Lecture	Tutorial / Practical	
Introduction to microprocessors and embedded processors.	4	2	2	
The 8051 microcontroller overview and programming model and architecture.	8	4	4	
The 8051 Assembly language programming and addressing modes.	8	4	4	
Arithmetic, logical, and jump instructions.	8	4	4	
I/O parallel port programming.	8	4	4	
The 8051 C programming.	8	4	4	
Timer, serial port, and interrupt programming in Assembly and C.	8	4	4	
Design projects.	6	4	2	

Teaching And Learning Methodologies :	
Interactive Lecturing	
Discussion	
Experiential learning	
Project	
Research	

Course Assessment :					
Methods of assessment	Relative weight %	Week No	Assess What		
Assignment	15.00				
Final Exam	40.00	16			
First Midterm Exam	15.00	6			
Laboratory Experiments	10.00				
Quizzes	10.00				
Second Midterm Exam	15.00	11			

Course Notes:

- 1. Lecture notes
- 2. Handouts.

Recommended books:

Recommended Reading: The 8051 Microcontroller: A Systems Approach, Janice Gillispie Mazidi, Muhammad Ali Mazidi, and Rolin D. McKinlay, Pearson, 2012
