

Faculty of Engineering & Technology

Vibration Principles and Monitoring

Information :

Course Code : MKT 510

Level : Undergraduate

Course Hours : 2.00- Hours

Department : Specialization of Mechatronics Engineering

Instructor Information :

Title	Name	Office hours
Professor	Hassan Ahmed Ahmed Mohamed Metered	2
Teaching Assistant	Osama Ahmed Ibrahim Mohamed Montaser	

Area Of Study :

- Gain a through introduction to mechanical vibration of single and multi-degree of freedom systems.
- Enrich the student's knowledge about techniques of machinery vibration control.
- Introduce the processes of monitoring operating conditions of industrial machinery and its relevance to fault detection and diagnosis.

Description :

Introduction to Vibration Principles, Fault detection techniques, Vibration as a Fault detection and diagnosis technique, Vibration Measurements and analysis, use of Vibration as a machinery condition monitoring.

Course outcomes :

a.Knowledge and Understanding: :

- 1 - Identify fundamentals of vibration analysis and control of mechanical systems.
- 2 - Describe vibration isolation techniques for mechanical systems
- 3 - Explain machinery vibration monitoring, and mechanical systems fault diagnosis.

b.Intellectual Skills: :

- 1 - Develop mathematical models for dynamic systems.
- 2 - Analyse vibration response of single and multi-degree of freedom systems
- 3 - Relate vibration response analysis to machine condition monitoring and fault diagnosis and use available software packages.

c.Professional and Practical Skills: :

- 1 - Perform experimental measurement for vibration isolation and control considering the safety precautions.
- 2 - Analyse recorded data of vibration testing.
- 3 - Prepare technical report for vibration control experimental work.
- 4 - Construct response curves of tested vibration control systems.

d.General and Transferable Skills: :

1 -	Work in stressful environment and within constrains through assignments and term papers.
2 -	Communicate effectively through technical reports and representations.
3 -	Search for information and engage in life-long self-learning discipline through self-study tasks.

Course Topic And Contents :

Topic	No. of hours	Lecture	Tutorial / Practical
Introduction to vibration as a machine condition monitoring.		2	0
Vibration analysis of damped and undamped single and multi-degree of freedom systems		8	4
Vibration transmission and isolating foundation design, vibration control techniques.		6	3
Characteristics of vibration signals and frequency analysis.		4	2
Vibration as a machine condition monitoring and fault diagnosis.		4	3

Teaching And Learning Methodologies :

Interactive Lecturing
Problem solving
Discussion
Experiential Learning
Term Paper
Research

Course Assessment :

Methods of assessment	Relative weight %	Week No	Assess What
Assignments, Participation, & Quizzes	20.00		
Final Exam	40.00	16	
First Midterm Exam	15.00	5	
Second Midterm Exam	15.00	10	
Term Paper (SelfStudy)	10.00		

Course Notes :

Lecture notes on the course Moodle page, FUE website.

Recommended books :
