

Faculty of Engineering & Technology

Functions of Several Variables and ODE (Math 3)

Information :

Course Code : MTH 211

Level : Undergraduate

Course Hours : 3.00- Hours

Department : Department of Petroleum Engineering

Instructor Information :

Title	Name	Office hours
Associate Professor	Hany Ahmed Attia El Gohary	6
Assistant Lecturer	Basma Magdy Ahmed Mohamed	6
Teaching Assistant	Reham Shawket Mostafa Taha Khalaaf	
Teaching Assistant	Bassel Yasser Mohamed Kamel	

Area Of Study :

Develop the students' knowledge about several variables, multiple integrals, ordinary differential equations, and vector Analysis.

Train students to perform basic mathematical models on electrical engineering applications.

Description :

Functions of several variables: Limits, Continuity, partial derivatives, Extrema and Constrained Extrema. Multiple integrals in Cartesian and Polar coordinates. Jacobians, Vector analysis: Scalar and vector fields, Gradient, Divergence, Curl and Directional derivative. Line integral, Green's theorem, Gauss's theorems, and Stoke theorem. Ordinary differential equations of the first and higher orders. Complementary and Particular solutions. Undetermined coefficients, and variation of parameters. Euler's equations and system of linear differential equations. Differential Operator method.

Course outcomes :

a. Knowledge and Understanding: :

1 -	Recognize vector and scalar quantities in calculus.
2 -	Explain partial derivative for the functions of several variables.
3 -	Define the line integral for both scalar and vector fields.
4 -	Identify different types of first and higher order ordinary differential equations.

b. Intellectual Skills: :

1 -	Apply theories of Vector analysis to solve engineering problems.
2 -	Solve the differential equations in engineering problems.

c. Professional and Practical Skills: :

1 -	Solve the different types of line integral problems.
2 -	Apply the system of differential equations to solve Engineering problems.

d.General and Transferable Skills :

1 - Communicate effectively.

Course Topic And Contents :

Topic	No. of hours	Lecture	Tutorial / Practical
Functions of several variables: Limits, Continuity, and partial derivatives, Chain rule. Tangent planes and normal lines, Extrema and Constrained Extrema.	10	6	4
Multiple integrals: Double integrals in Cartesian and Polar coordinates, Jacobians, Cylindrical and spherical coordinates	10	6	4
Vector analysis: Scalar and vector fields, Surface integrals of scalar and vector functions, gradient, divergence, curl, directional derivative, Line integrals.	10	6	4
Line integrals, Green's theorem, Gauss's theorem, Stoker's theorem and triple integrals in Cartesian and Polar coordinates.	10	6	4
Ordinary differential equations: Equations of the first order: Separable, Homogenous, nearly Homogenous, Exact, Linear, Bernoulli. Ricatti.	10	6	4
Higher order linear equations. Equations of the second order. Equations reducible to the first order. Complementary, and particular solutions.	10	6	4
Methods of Undetermined coefficients, and variation of parameters. Euler's equation	10	6	4
System of linear differential equations. Differential Operator method.	5	3	2

Teaching And Learning Methodologies :

Interactive Lecture

Discussion

Problem-based Learning

Report

Course Assessment :

Methods of assessment	Relative weight %	Week No	Assess What
Assignment	5.00		
Final Exam	40.00		
Lab.Computer	5.00		
Mid- Exam I	15.00		
Mid- Exam II	25.00		

Quizzes

10.00
