Description :

The course provides pharmacy students with different pharmacognostical means in identification of natural drugs, especially fruits, subterranean, and herbs morphologically and histologically. Additionally, the students will be introduced to the field of chemical natural products dealing with some examples of the marketed unorganized drugs. The course describes methods for detection and identification of them physically and chemically. By the end of this course, the student will be able to recognize and summarize the main characteristic differences between drugs obtained from different organs.
