

# **A Systematic Approach to Develop Risk Registry Frameworks for Complex Projects.**

*Rana Khallaf, Nader Naderpajouh, Makarand Hastak*

## **Abstract**

The purpose of this paper is to build upon the extensive application of risk registries in the construction literature and establish a systematic methodology to develop risk registries. Risk registries channel judgment of experts as a basis for risk analysis and should be tailored for each project to be more effective. Given their prevalence, there is a need for systematic integration of tacit and explicit knowledge to develop practical risk registries.
