

Simultaneous determination of diloxanide furoate and metronidazole in presence of diloxanide furoate degradation products

Mohamed Mohamed ,Samah S Abbas, Nour E Wagieh, Maha M Abdelrahman

Professor of Analytical Chemistry

Abstract

Three methods are presented for the simultaneous determination of diloxanide furoate (DLX) and metronidazole (MTR), used for their antiprotozoal and antiamoebic effect, in the presence of DLX alkaline degradates and in pharmaceutical formulations, without previous separation. The first method is chemometric-assisted spectrophotometry, in which principal component regression and partial least squares were applied. These two approaches were successfully applied to quantify each drug in the mixture using the information included in ...
