

Validated RP-HPLC and TLC-Densitometric Methods for Analysis of Ternary Mixture of Cetylpyridinium Chloride, Chlorocresol and Lidocaine in Oral Antiseptic Formulation

Mohamed Mohamed ,Nada S Abdelwahab, Nouruddin W Ali,Aml A Emam

Abstract

Abstract This work was concerned with development, optimization, application and validation of reversed phase high performance liquid chromatography (RP-HPLC) and thin

layer chromatography (TLC)-densitometric methods for analysis of cetylpyridinium chloride,

depending on chromatographic separation on a ZORBAX Eclipse Plus C 8 column, with

elution with a mobile phase consisting of 0.05% phosphoric acid solution:

acetonitrile: ...
